12. (Cancelled)
13. (Cancelled)
14. (Amended) A rainscreen apparatus ~~according to claim 1~~ including: a substantially rigid air barrier adapted for attachment to a building structure wherein said rigid air barrier is in the form of at least one thin sheet comprising a polymeric or substantially water repellent cellulosic material, said sheet having a relatively rigid reinforcing means attached thereto; a rainscreen panel adapted for attachment over the air barrier; a spacing member adapted to provide a clearance space between the air barrier and the rainscreen panel; and sealing means adapted to provide substantial pressure equalisation within the clearance space.
15. (Previously presented) A rainscreen apparatus according to claim 14 wherein said sheet includes a polyolefin material having a relatively rigid reinforcing means including a mesh of fibreglass, metal or polymeric material laminated to at least one surface of said sheet.

16. (Previously presented) A rainscreen apparatus according to claim 14 wherein said sheet includes a polyolefin material having a relatively rigid reinforcing means including a series of battens or the like laminated to at least one surface of said sheet.

20. (Cancelled)
21. (Cancelled)
22. (Cancelled)
23. (Amended) A rainscreen apparatus including: at least two adjacent substantially rigid air barriers adapted for attachment to a building structure; a rainscreen panel adapted for attachment over the air barriers; a spacing member adapted to provide a clearance space between the air barriers and the rainscreen panel; sealing means adapted to provide substantial pressure equalisation within the clearance space; and a rainscreen air barrier joint seal for sealing a joint between the at least two adjacent rigid air barriers of the rainscreen apparatus according to claim 1, said seal including a sealing strip of a substantially resilient material having a first surface and a second surface opposite to said first surface, said first surface being adapted to contact said rigid air barriers, and at least one batten provided in use over said second surface of the seal strip, said batten being in contact with the second surface so as to maintain said first surface of the strip in contact with the region of said air barrier adjacent to said joint.
24. (Previously Presented) A rainscreen air barrier joint seal according to claim 23 wherein said first surface has an adhesive provided thereon.
25. (Previously Presented) A rainscreen air barrier joint seal according to claim 23 wherein said second surface has an adhesive provided thereon.

26. (Amended) A rainscreen apparatus including: a substantially rigid air barrier adapted for attachment to a building structure; a rainscreen panel adapted for attachment over the air barrier; a spacing member adapted to provide a clearance space between the air barrier and the rainscreen panel; a sealing means adapted to provide substantial pressure equalisation within the clearance space; and a rainscreen flashing including a first edge portion adapted to be located on or adjacent to a lower edge of said air barrier of said rainscreen apparatus according to claim 1, a second edge portion adapted to be located on or adjacent to an upper region of said rainscreen panel provided below said air barrier, and a central portion which is contiguous with said first and second edge portions and is provided at a substantially obtuse angle to said first and second edge portions.
27. (Previously Presented) A rainscreen flashing according to claim 26 wherein said central portion slopes downwardly to allow water to drain over said central portion and exterior to said rainscreen panel.
28. (Amended) A rainscreen apparatus including: a substantially rigid air barrier adapted for attachment to a building structure; a rainscreen panel adapted for attachment over the air barrier; a spacing member adapted to provide a clearance space between the air barrier and the rainscreen panel; a sealing means adapted to provide substantial pressure equalisation within the clearance space; and a rainscreen vent for the rainscreen apparatus according to claim 1 having a rigid air barrier and a rainscreen panel and a space therebetween, said vent including a first wall adapted for location on or adjacent to said air barrier, a second wall adapted to be located on or adjacent to an internal surface of said rainscreen panel, and a central portion connected between said first and second walls, said central portion having one or more apertures therein allowing liquid to drain from said space and also allowing ingress of air into said space.

29. (Amended) A rainscreen apparatus including: a substantially rigid air barrier adapted for attachment to a building structure; a rainscreen panel adapted for attachment over the air barrier; a spacing member adapted to provide a clearance space between the air barrier and the rainscreen panel; a sealing means adapted to provide substantial pressure equalisation within the clearance space; and a rainscreen seal construction including a batten for location on the air barrier of rainscreen apparatus according to claim 1, a sealing member having a base and at least two lips projecting from said base, said lips being spaced from each other, one lip being adapted to make a substantially sealing contact with a rear surface of a first rainscreen panel, and the second lip being adapted to make a substantially sealing contact with the rear surface of a second rainscreen panel, said second panel being located adjacent to the first panel.
